

Kinley Sustainability Statement

Reviewed: November 2022

At Kinley we recognize the responsibility we have to the environment and understand the effect that business operations have on it. We are committed to playing our part by integrating sustainability into the heart of Kinley, its products, and processes. We are dedicated to preventing pollution and to comply with all relevant environmental legislation, regulations, and other environmental requirements.

Since defining our environmental objectives, targets and actions related to our environmental aspect, we have taken steps to ensure that the impact from our business operations is significantly reduced. We have achieved a Carbon Assessed Standard on our Kinley steel Bison edging product, which produces 52% less emissions on the 75mm Bison steel edging than that of the standard 150mm concrete edging alternative.

We will continue to review our processes to prevent environmental non-conformities and to ensure that we achieve a reduce-reuse-recycle approach across our business operations. In line with our policy, we will:

- minimise the consumption of finite natural resources, and reuse or recycle these where practicable
- develop products that offer reduced environmental impact across their entire life cycle
- investigate ways in which we can further reduce our carbon emissions on our other products
- engage employees in carbon literacy and sustainability training programmes
- reuse, recycle or responsibly dispose of all non-hazardous waste
- communicate our environmental policy and promote sustainability across the supply chain
- optimise the use of technology where it is proven to bring environmental benefits

Our commitment to sustainability is focused on achieving these objectives and will be reviewed regularly and updated to take account of organisational priorities and changes in environmental legislation and good practice.

Darren Bowie,
Managing Director.

For, and on behalf of, Kinley Management.
